Sydney, Australia (Citizen)
0435 739 578

Summary

Multi-disciplinary engineer with 10 years of work experience in delivering production systems in early-stage startups and independent R&D environments and customer focused experiences. Strong background in programming, applied machine learning, and developer tooling. Proven ability to take products from concept to launch and work in teams receiving feedback. Seeking a stable role with long-term sustainable growth and diverse responsibilities.

Education

Bachelor of Science & Engineering (MedSci & Robotics), from UTS (University of Technology Sydney)	<i>Expected 2027</i>
Cert IV in IT (Cyber Security & Software Development), from TAFE NSW	<i>Graduated 2020</i>

Skills Overview

Frontend & Mobile React (+Next.JS), Flutter, Tailwind, Angular, Bootstrap	Healthcare Cell Culturing, Gene Recombination, iPSCs, Fiji, 3D Bioprinting, Data Privacy
Backend & Systems - Node.js, REST APIs - SQL (MySQL, PostgreSQL), basic NoSQL (MongoDB) - Rust (Performance-focused applications) - Java & C# (Business logic)	Cyber Security Network security basics, secure software practices
Cloud, Tooling & Testing - Git, CI/CD concepts/workflows, Docker - Microsoft Azure, Google Cloud Platform & Vercel - Unit and Integration Testing (Jest, JUnit concepts)	Mechatronics - Circuit analysis & Digital Circuit Design (FPGA) - C++ (STM32 & Arduino Embedded Systems) - Computer Aided Drafting (CAD)
	Artificial Intelligence & Machine Learning Neural Networks, Decision Trees, Fuzzy Logic

Abridged Experience

Full Stack Developer, at Coreable	<i>1 year</i>
- Built and deployed a production-ready web servers — from early prototype through to launch — by collaborating closely with UI/UX designers and business stakeholders using Scrum and Agile - Created cross-platform frontend components using React (Typescript), and backend APIs with GraphQL, MySQL, Node.JS, express and Docker - Owned system architecture and deployment decisions, ensuring reliability at launch by performing code reviews (and automation with codebeat) and managing CI/CD pipelines (gcloud)	
Software Developer, at ClockOn	<i>9 months</i>
Worked as part of a small corporate team building web/mobile applications and solutions using technologies such as C# ASP.NET, Visual Studio Debugger, JavaScript, HTML, CSS (Bootstrap studio) and third-party UI components	

Independent Technical Projects

- Created and published a Visual Studio Code extension for Arduino .ino files (400+ downloads & 5-star reviews)
- R&D project exploring genetic clinical support with Flutter and Material Design; archived due to funding constraints
- Trained a neural network classifier in TensorFlow Keras (Python) for medical adjacent applications (CNN & MLP)
- Designed a 3D printable IoT robot arm with calculated celestial Low Earth Object tracking for Arduino (C++)
- Implemented a Web Assembly (WASM) Spiking Neural Network as a psychology research-based learning project
- Re-created a CHIP-8 virtual machine in Rust for CPU architecture research, compatible with existing video games
- Launched a Wikipedia-like information aggregation platform for diverse viewpoints using Next.JS, Supabase & Vercel
- Built a custom community forum & gaming server with MongoDB & EJS (JavaScript) for online PC gamers
- Modernizing biological lab research with a management platform built with Tauri (Rust), TypeScript, mDNS & SQLite

Additional Information

- Available full time (40 hours/week) on negotiation
- Soft skills include cross-disciplinary communication, team collaboration, and empathetic mentorship
- Engineers Australia Associate Member and WH&S Whitecard holder, former Australian Computing Society member
