

JAKE WALKLATE

→ jake@svnty.is-a.dev

Professional Summary

Computer engineer with experience delivering production systems in early-stage startups and independent R&D environments. Strong background in systems programming, applied machine learning, and developer tooling. Proven ability to take products from concept to launch under constraints. Seeking a stable engineering role with clear scope and long-term sustainable growth.

Education

Bachelor of Medical Science & Engineering (Pathology & Robotics), from UTS
Cert IV in IT (Cyber Security & OOP), from TAFE

From 2021
Graduated 2020

Skills

Frontend & Mobile

- React (+Next), JavaScript / TypeScript, Flutter, Tailwind

Backend & Systems

- Node.js, REST APIs, GraphQL
- SQL (MySQL, PostgreSQL), basic NoSQL (MongoDB)
- Rust (systems and performance-focused applications), Java & C# (OOP)

Cloud & Tooling

- Git, CI/CD concepts
- Microsoft Azure, Google Cloud Platform & Vercel deployment

Testing

- Unit and integration testing (Jest, JUnit concepts)

Cyber Security

- Threat modelling, network security principles, vulnerability assessment, and secure software practices

Experience

Founding Backend Engineer, at Coreable

1 year

- Built and deployed a production-ready web application — from early prototype through to launch — by collaborating closely with UI/UX designers and business stakeholders
- Designed and implemented backend and frontend components using React, GraphQL, MySQL, and Node.JS
- Owned system architecture and deployment decisions, ensuring reliability at launch by performing code reviews and managing CI/CD pipelines

Software Developer, at ClockOn

9 months

- Worked as part of a dynamic team with a probationary contract building web and mobile application and solutions using technologies such as C# .NET, Visual Studio, JavaScript and third-party components

Independent Technical Work

- Created and published a VS-Code extension (300+ downloads, 5 star reviews) [vscode-arduino-intellisense](https://vscode-arduino-intellisense.github.io/)
- R&D project exploring genetic clinical decision-support; archived due to funding medicamina.us/dash/home
- Trained a neural network classifier for medical adjacent applications svnty/blood-cell-classification
- Designed a 3D printable IoT robot arm with integrated object tracking svnty/ISS-arduino-tracker
- Implemented a WASM Spiking Neural Network as a research-based learning project work/pavlovs-dog
- Developed a CHIP-8 virtual machine in Rust work/chip8-emulator
- Launched an information aggregation platform for diverse global viewpoints [alternipedia/alternipedia](https://alternipedia.com/)

Additional Information

- Eligible to work in Sydney Australia and Tokyo Japan; open to different international roles
- Available full time (40 hours/week) on negotiation
